SAFE SERVICING PRACTICES - ALL APPLIANCES

To avoid personal injury and/or property damage, it is important that Safe Servicing Practices be observed. The following are some limited examples of safe practices:

1. **DO NOT** attempt a product repair if you have any doubts as to your ability to complete it in a safe and satisfactory manner.

2. Before servicing or moving an appliance:
   - Remove the power cord from the electrical outlet, trip the circuit breaker to the OFF position, or remove the fuse.
   - Turn off the gas supply.
   - Turn off the water supply.

3. Never interfere with the proper operation of any safety device.

4. **USE ONLY REPLACEMENT PARTS CATALOGED FOR THIS APPLIANCE. SUBSTITUTIONS MAY DEFEAT COMPLIANCE WITH SAFETY STANDARDS SET FOR HOME APPLIANCES.**

5. **GROUNDING:** The standard color coding for safety ground wires is **GREEN**, or **GREEN** with **YELLOW STRIPES**. Ground leads are not to be used as current carrying conductors. It is **EXTREMELY** important that the service technician reestablish all safety grounds prior to completion of service. Failure to do so will create a hazard.

6. Prior to returning the product to service, ensure that:
   - All electrical connections are correct and secure
   - All electrical leads are properly dressed and secured away from sharp edges, high-temperature components, and moving parts
   - All non-insulated electrical terminals, connectors, heaters, etc. are adequately spaced away from all metal parts and panels
   - All safety grounds (both internal and external) are correctly and securely connected
   - All panels are properly and securely reassembled

---

**ATTENTION!!!**

This service manual is intended for use by persons having electrical and mechanical training and a level of knowledge of these subjects generally considered acceptable in the appliance repair trade. Electrolux Home Products cannot be responsible, nor assume any liability, for injury or damage of any kind arising from the use of this manual.

QUICK REFERENCE SHEET

1. Serial nameplate location: on the front panel at the left side of the dryer door opening.

2. Serial number breakdown.

   X  D  5  0  4  0  4  2  4  7
   Incremented unit number
   Production week
   Last digit of production year
   Product identification
   Manufacturing Facility

3. Tech sheet location

   Front console models: on the right-hand bodyside behind the front panel and inside rear access panel.
Function test sequence

This is a functional test for the dryer. To activate this mode, perform the following steps:

1. Digital Display Models: Turn the cycle selector knob to the Normal position.
   Non-Digital Display Models: Turn the cycle selector knob to the 12 O’clock position.

2. Press and hold the Select and Pause Cancel buttons simultaneously for (6) seconds.

3. Immediately after, press and hold the Pause Cancel and START buttons for (4) seconds.

The control will enter the test mode, the buzzer will sound 3 times and all LED’s will rapidly flash.

After entering the test mode, the selector know can now be rotated to select the following test.

Rotate program knob clockwise from the start position:

1 Turn  Drive motor runs, heat source is on. Drying LED is lit. “H” and the control thermistor reading will toggle back and forth in the display. **

2 Tums  Drive motor runs; heat source is off. Cool Down LED is lit and “AF” (Air Fluff) is displayed.

3 Tums  Drive motor runs; heat source is off. Drying and Cool Down LED’s are lit and numbers appear in the display showing moisture sensor readings. Opening the door (press in on door switch plunger) and placing a finger on both moisture sense bars at the same time will make the numbers decrease. In controls that do not have a digital display, the More Dry LED should be ON. Opening the door (press in on door switch plunger) and placing a finger on both moisture sense bars at the same time will make the DAMP LED come on.

4 Tums  Drive motor runs; heat source is off. Key test:
   a. When the Temp key is pressed, all the Temp LEDs should light. If the Temp selector is the rotary knob, and the knob is rotated, there should be a key beep with each setting.

5 Turns  Drive motor runs; heat source is off. Cool Down LED is lit. Control thermistor reading is displayed.**

6 Turns  Drive motor runs; heat source is on. Drying LED is lit. Control thermistor reading is displayed.**

**For models that do not have a digital display, the dryness LED’s are used to determine the control thermistor reading. The number of flashes of the bottom three LEDs will determine the value of the temperature as follows.

NORMAL = HUNDRED’S
LESS DRY = TEN’S
DAMP = ONE’S

Example: Normal flashes 1 time
Less Dry flashes 2 times
Damp flashes 6 times
Temperature = 126 degrees.

To EXIT test mode, press and hold the Select and Pause Cancel buttons simultaneously for six seconds or disconnect power from dryer. Dryer will be reset for regular operation.

### Before Operating Your Dryer

Read your dryer Use and Care Guide. It has important safety and warranty information. It also has many suggestions for best drying results.

**WARNING** To reduce the risk of fire, electric shock or injury to persons, read the IMPORTANT SAFETY INSTRUCTIONS in your dryer Use and Care Guide before operating this appliance.

### Operating Steps

Read “Drying Procedures” in your Use and Care Guide. It explains these operating steps in detail.

1. Prepare items for drying.
2. Check that lint screen is clean and in place.
4. Select the cycle and drying temperature for each load. To change the temperature, turn the TEMP knob to the desired temperature.
5. A suitable dryness level and options will automatically be displayed for each cycle. To change the dryness level, press DRYNESS until the desired selection is made. To select an option, press OPTIONS until the indicator for a desired option flashes and press SELECT. Follow the same steps to delete an option. If a dryness level or option is not available for a cycle, it will not light.
6. The changes you make will be remembered the next time that cycle is selected. See the “Dryer Settings Chart” for more details.
7. Press START to begin cycle.
   - To pause the cycle or change settings, press PAUSE/CANCEL once. To resume the cycle, press START again.
   - To stop or change the cycle, press PAUSE/CANCEL twice.
8. A signal will sound at the end of the cycle and periodically during Press Saver when the Cycle Signal option is selected. When the cycle ends, remove items immediately and hang or fold.
9. Clean the lint screen after every load.

### Cycle Selection

For best results, follow the fabric care label instructions on items to be dried.

**Auto Dry**

Auto Dry cycles take the guesswork out of drying time. The load will automatically be dried at the selected temperature to the desired dryness level. The dryer senses the moisture level of the load as it tumbles through heated air. Auto Dry cycles save time and energy and protect fabrics.

When the load has reached the selected dryness level, it will continue to tumble, unheated, during a Cool Down period. This helps reduce wrinkling and makes items easier to handle during unloading.

Drying time varies depending on size and dampness of load and fabric type. Room temperature and humidity, type of installation and electrical voltage or gas pressure can also affect drying time.

**Towels**

Select this Auto Dry cycle for towel loads.
Normal
Select this Auto Dry cycle for cotton items.

Perm Press
Select this Auto Dry cycle to dry cotton items and blends with a no-iron finish.

Delicates
Select this Auto Dry cycle for knit and delicate items.

Quick
Select this Auto Dry cycle to quickly dry a small load made up of just a few items.

Touch Up
Select Touch Up to help remove wrinkles from clean and dry items that were not taken from the dryer at the end of the cycle, have been stored in crowded closets or drawers, or unpacked from luggage following a trip. It provides approximately 10 minutes of low heat tumbling followed by a 5-minute cool down period.

Note: To change cycles, press PAUSE CANCEL twice.

Temperature Selection
For best results, follow the fabric care label instructions on items to be dried. Select the temperature setting most suitable for each load.

High is recommended for sturdy fabrics.

Medium is recommended for wrinkle free, permanent press and lightweight fabrics.

Medium-Low is recommended for most knits.

Low is recommended for delicate fabrics.

No Heat should only be used with a Timed Dry setting to dry items containing feathers, down, foam rubber, plastics or rubber-like materials; to freshen clothing, pillows or blankets; or to dust draperies.

Note: Using No Heat in any Auto Dry cycle will result in long drying times and/or wet loads at the end of the cycle.

WARNING To avoid fire hazard, do not use heat to dry items containing feathers or down, foam rubber, plastics, or similarly textured, rubber-like materials. Use the No Heat cycle only.

Cycle Adjustments
A suitable combination of dryness level and options will automatically be displayed for each cycle. The settings can be changed before the cycle is started. Those adjustments will automatically be remembered each time that cycle is selected. If a dryness level or option is not recommended for a cycle, the indicator will not light. See the “Dryer Settings Chart” for more details.

If changes are attempted after the cycle starts, the status lights will blink and the signal will beep 3 times. The cycle must be paused before the settings can be changed.

Dryness Level
To change the dryness level, press DRYNESS until the desired selection is made. Select Normal for most loads.

Occasionally a load may seem too damp or overdried at the end of the cycle. To increase drying time for similar loads in the future, select More Dry. For loads requiring less drying time, select Less Dry.

Select Damp Dry for items you wish to partially dry before hanging or ironing.

Note: To prevent over-drying, not every dryness level is available with every cycle.

Options
To select an option, press OPTIONS until the indicator for the desired option flashes and press SELECT. If an option is not available for a cycle, the indicator will not light. Follow the same steps to delete an option.

The Cycle Signal will sound at the end of the cycle and periodically during Press Saver.

Select Press Saver if the dried load might not be removed promptly at the end of the cycle. The dry load will continue tumbling without heat for 30 minutes to help reduce wrinkling. When the Cycle Signal is selected, a beep will be heard periodically. The load may be removed any time during Press Saver.
Dryer Features

Control 🛑 (Control Lock)

To avoid having someone accidentally start or stop the dryer, press OPTIONS and SELECT at the same time until the Control 🛑 (Control Lock) indicator is lighted. To remove the control lock, press OPTIONS and SELECT again.

Status Lights

The following indicators may be lighted during the cycle:
   • Drying
   • Cool Down
   • Press Saver
   • Clean Lint Filter
   • Control 🛑 (Control Lock)
**DRYER SETTING CHART**

SECTION B - OWNERS GUIDE

**WARNING** Your safety, the information in this manual must be followed to minimize the risk of fire or explosion or to prevent property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

**WHAT TO DO IF YOU SMELL GAS:**

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Clear the room, building or area of all occupants.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.

---

**Your safety and the safety of others is very important.**

We have provided many important safety messages in the Use and Care Guide, Operating Instructions, Installation Instructions and on your appliance. Always read and obey all safety messages.

⚠️ This is the safety alert symbol. This symbol alerts you to hazards that can kill or hurt you or others. All safety messages will be preceded by the safety alert symbol and the word “DANGER” or “WARNING”. These words mean:

**DANGER** You will be killed or seriously injured if you don’t follow instructions.

**WARNING** You can be killed or seriously injured if you don’t follow instructions.

All safety messages will identify the hazard, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.

---

**Pedestal**

A pedestal accessory specifically designed for this dryer may be used when elevating the dryer for ease of use.

Failure to use accessories certified by the manufacturer could result in personal injury, property damage or damage to the dryer.

---

**Important Safety Instructions**

Read all instructions before using this dryer.

⚠️ **WARNING** To reduce the risk of fire, electrical shock, or injury to persons when using this dryer, comply with the basic warnings listed below.

⚠️ Failure to comply with these warnings could result in serious personal injuries.

**Prevent Fire**

⚠️ **WARNING** Do not dry items that have been previously cleaned in, soaked in, or spotted with gasoline, cleaning solvents, kerosene, waxes, etc. Do not store these items on or near the dryer. These substances give off vapors that could ignite or explode.

⚠️ **WARNING** Do not place items exposed to cooking oils in your dryer. Items contaminated with cooking oils may contribute to a chemical reaction that could cause a load to catch fire.

⚠️ **WARNING** To prevent fire, do not use heat to dry items containing plastic, foam rubber or similarly textured rubber-like materials, or items containing feathers or down. Use Air Fluff (No Heat) only.

**Care and Cleaning**

Clean the lint screen before or after each load. The interior of the dryer, lint screen housing and exhaust duct should be cleaned approximately every 18 months by qualified service personnel. An excessive amount of lint build-up in these areas could result in inefficient drying and possible fire. See Care and Cleaning.
**WARNING** Do not operate the dryer if the lint screen is blocked, damaged or missing. Fire hazard, overheating and damage to fabrics can occur. If your dryer has a drying rack, always replace the lint screen when finished using the drying rack.

**WARNING** Keep area around the exhaust opening and surrounding areas free from the accumulation of lint, dust and dirt.

**WARNING** Do not obstruct the flow of ventilating air. Do not stack or place laundry or throw rugs against the front or back of the dryer.

**WARNING** Do not spray any type of aerosol into, on or near dryer at any time.

**WARNING** Do not use fabric softeners or products to eliminate static unless recommended by the manufacturer of the fabric softener or product.

**Failure to comply with these warnings could result in fire, explosion, serious bodily injury and/or damage to the rubber or plastic parts of the dryer.**

This Use and Care Guide provides general operating instructions for your dryer. It also contains information about features for several other models. Your dryer may not have every feature included.

Use the dryer only as instructed in this Use & Care Guide and the Operating Instructions card included with your dryer.

**WARNING** Avoid fire hazard or electrical shock. Do not use an adaptors plug or extension cord or remove grounding prong from electrical power cord. Failure to follow this warning can cause serious injury, fire or death.

**GAS DRYERS:**

Grounding type wall receptacle

Do not under any circumstances cut, remove, or bypass the grounding prong from this plug.

Power supply cord with 3-prong grounding plug

**CORRECT**

Use this way ONLY

**Note:** The instructions appearing in this Owner's Guide are not meant to cover every possible condition and situation that may occur. Common sense and caution must be practiced when installing, operating and maintaining any appliance.

**Protect Children**

**WARNING** Do not allow children to play on or in the dryer. Close supervision of children is necessary when the dryer is used near children. As children grow, teach them the proper, safe use of all appliances.

**WARNING** Destroy the carton, plastic bag and other packing materials after the dryer is unpacked. Children might use them for play. Cartons covered with rugs, bedspreads or plastic sheets can become airtight chambers.

**WARNING** Keep laundry products out of children’s reach. To prevent personal injury, observe all warnings on product labels.

**WARNING** Before the dryer is removed from service or discarded, remove the dryer door to prevent accidental entrapment.

**WARNING** Failure to comply with these warnings could result in serious personal injuries.

**Prevent Injury**

**WARNING** To prevent shock hazard and assure stability during operation, the dryer must be installed and electrically grounded by a qualified service person in accordance with local codes. Installation instructions are
packed in the dryer for the installer's reference. Refer to INSTALLATION INSTRUCTIONS for detailed grounding procedures. If the dryer is moved to a new location, have it checked and reinstalled by a qualified service person.

**WARNING** To prevent personal injury or damage to the dryer, the electrical power cord of a gas dryer must be plugged into a properly grounded and polarized 3-prong outlet. The third grounding prong must never be removed. Never ground the dryer to a gas pipe. Do not use an extension cord or an adaptor plug.

**WARNING** ALWAYS disconnect the dryer from the electrical supply before attempting any service or cleaning. Failure to do so can result in electrical shock or injury.

**WARNING** Do not use any type spray cleanser when cleaning dryer interior. Hazardous fumes or electrical shock could occur.

**WARNING** To prevent injury, do not reach into the dryer if the drum is moving. Wait until the dryer has stopped completely before reaching into the drum.

**WARNING** To prevent injury and damage to the dryer:

- All repairs and servicing must be performed by an authorized servicer unless specifically recommended in this Owner's Guide. Use only authorized factory parts.

- Do not tamper with controls.

- Do not install or store the dryer where it will be exposed to the weather.

A thermal limiter switch automatically turns off the motor in the unlikely event of an overheated situation (electric dryers only). A service technician must replace the thermal limiter switch after correcting the fault.

Failure to comply with these warnings could result in serious personal injuries.

SAVE THESE INSTRUCTIONS

Drying Procedures

- Follow the guidelines below for preparing the load for drying.

- Read the Operating Instructions card for operating your specific model.

- Always read and follow fabric care labels and laundry product labels.

**WARNING** To reduce the risk of fire, electrical shock, or injury to persons, read Important Safety Instructions before operating this dryer.

1. Prepare items for drying.

- Dry items of similar fabric, weight and construction in the same load.

- Separate dark items from light-colored items. Separate items that shed lint from those that attract lint. If an item sheds lint, turn it inside out.

- Be sure buckles, buttons and trim are heatproof and won't damage the drum finish. Close zippers, fasten hooks and Velcro®-like fasteners. Tie strings and sashes to prevent snagging and tangling.

- If possible, turn pockets inside out for even drying.

- Check for stains which may not have been removed in washing. Dryer heat may permanently set some stains. Repeat stain removal process before drying.

- Place small items in a mesh bag to prevent tangling and for easy removal.

2. Check that lint screen is clean and in place.
3. Load the dryer.

   - The average load will fill the drum 1/3 to 1/2 full. Items need room to tumble freely for even drying and less wrinkling. **Do not overload dryer.**

   - When drying large items, dry only 2 or 3 at a time. Fill out the load with small and medium sized items.

   - For delicate or very small loads, add 2 lint-free towels for better drying, less wrinkling, and to prevent grease stains caused by fabric softener sheets.

   - Do not overdry items. Overdrying can cause wrinkling, shrinkage, harshness, and a build-up of static electricity, which can produce more lint.

   - If desired, add a dryer fabric softener sheet.

4. Close the dryer door and select the cycle, temperature, dryness level and options desired.

   See **Operating Instructions** card for your specific model information.

5. **Press START to begin the cycle.**

   - To add or remove items when the dryer is running open the door. The dryer will stop when the door is opened. Allow the drum to come to a complete stop before reaching inside.

   - Close the door and press START to resume the cycle.

6. **When the cycle ends, remove items immediately and hang or fold.**

---

**Features**

**End of Cycle Signal**

A signal will sound at the end of the cycle and periodically during Press Saver at the volume level selected. (some models)

**Drum Light (some models)**

A drum light will come on whenever the door is opened to illuminate the dryer drum during loading and unloading. Closing the door turns off the light.

**Reversible Dryer Door**

Your dryer is equipped with a reversible door. The door can be hinged on the right or left side. Refer to the INSTALLATION INSTRUCTIONS for directions on changing the door.

**Drying Rack (some models)**

Use the drying rack to dry items which should not be tumble dried.

1. Open the dryer door and remove the lint screen.

2. Insert drying rack into the dryer drum. Place the front bar under the lip of the lint screen opening.

3. Place items to be dried on top of the rack. Weight should not exceed 10 lbs. Leave space between items, but do not let items hang over the sides or through the grids. Do not tumble other items when using the drying rack.

4. Select a timed dry. Use only the Air Fluff (no heat) temperature setting for items containing plastic, foam rubber, rubber-like materials, feathers or down.

5. When items are dry, remove the rack and replace the lint screen. If lint screen is not in place, tumbling items could enter the exhaust system and cause damage to the dryer.
## Common Drying Problems

Many drying problems involve poor cleaning results, poor soil and stain removal, residues of lint and scum, and fabric damage. For satisfactory drying results, follow these suggestions provided by The Soap and Detergent Association.

Care and Cleaning

**WARNING** To reduce risk of fire or serious injury to persons or property, comply with the basic warnings listed in *Important Safety Instructions* and those listed below.

- Before cleaning the dryer interior, **unplug the electrical power cord** to avoid electrical shock hazards.
- Do not use any type spray cleanser when cleaning dryer interior. Hazardous fumes or electrical shock could occur.

**Inside**

- Clean the lint screen after every load. Lint build-up in the screen restricts air flow, which causes longer drying times. The screen is located at the bottom of the door opening. Remove by pulling straight up. Remove the lint and replace the screen.
- Occasionally a waxy build-up may form on the lint screen from using dryer-added fabric softener sheets. To remove this build-up, wash the lint screen in warm, soapy water. Dry thoroughly and replace. Do not operate the dryer without the lint screen in place.
- If the dryer drum becomes stained from noncolorfast fabrics, clean the drum with a damp cloth and a mild liquid household cleanser. Remove cleanser residue before drying the next load.
- Every 18 months an authorized servicer should clean the dryer cabinet interior and exhaust duct. These areas can collect lint and dust over time. An excessive amount of lint build-up could result in inefficient drying and possible fire hazard.

**Outside**

- Clean the cabinet with mild soap and water. **Never use harsh, gritty or abrasive cleansers.**
- If the cabinet becomes stained, clean with diluted chlorine bleach [1/2 cup (120 ml) in 1 quart (.95 liter) water]. Rinse several times with clear water.
- Remove glue residue from tape or labels with a mixture of warm water and mild detergent. Or, touch residue with the sticky side of the tape or label.
- **Before moving the dryer**, place a strip of cardboard or thin fiberboard under the front leveling legs to prevent damage to floor.
- Do not store or place laundry products on top of dryer at any time. They can damage the finish or controls.
### Avoid Service Checklist

Before calling for service, review this list. It may save both time and expense. The list includes common occurrences that are not the result of defective workmanship or materials in this dryer.

YOUR FRIGIDAIRE PRODUCT IS PROTECTED BY THIS WARRANTY

Your appliance is warranted by Frigidaire Home Products, a division of White Consolidated Industries, Inc. We authorize no person to change or add to any of our obligations under this warranty. Our obligations for service and parts under this warranty must be performed by Frigidaire or an authorized Frigidaire servicer.

This warranty applies only to products in ordinary household use, and the consumer is responsible for the items listed below:

1. Proper use of the appliance in accordance with instructions provided with the product.
2. Proper installation by an authorized servicer in accordance with instructions provided with the appliance and in accordance with all local plumbing, electrical and/or gas codes.
3. Proper connection to a grounded power supply of sufficient voltage, replacement of blown fuses, repair of loose connections or defects in house wiring.
4. Expenses for making the appliance accessible for servicing, such as removal of trim, cupboards, shelves, etc., which are not a part of the appliance when it was shipped from the factory.
5. Damages to finish after installation.
6. Replacement of light bulbs and/or fluorescent tubes (on models with these features).

This warranty does not cover the following:

1. CONSEQUENTIAL OR INCIDENTAL DAMAGES SUCH AS PROPERTY DAMAGE AND INCIDENTAL EXPENSES RESULTING FROM ANY BREACH OF THIS WRITTEN OR ANY IMPLIED WARRANTY.
   Note: Some states do not allow the exclusion or limitation of incidental or consequential damages, so this limitation or exclusion may not apply to you.
2. Service calls which do not involve malfunction or defects in workmanship or material, or for appliances not in ordinary household use. The consumer shall pay for such service calls.
3. Damages caused by services performed by servicers other than Frigidaire or its authorized servicers; use of parts other than genuine Frigidaire Home Products parts; obtained from persons other than such servicers; or external causes such as abuse, misuse, inadequate power supply or acts of God.
4. Products with original serial numbers that have been removed or altered and cannot be readily determined.

IF YOU NEED SERVICE

Keep your bill of sale, delivery slip, or some other appropriate payment record. The date on the bill establishes the warranty period should service be required. If service is performed, it is in your best interest to obtain and keep all receipts. This written warranty gives you specific legal rights. You may also have other rights that vary from state to state. Service under this warranty must be obtained by contacting Frigidaire Home Products:

800 • 944 • 9044
Frigidaire Home Products
P.O. Box 212378
Augusta, GA 30917

FRIGIDAIRE DRYER WARRANTY

WARRANTY PERIOD FRIGIDAIRE, THROUGH ITS AUTHORIZED SERVICERS, WILL:
THE CONSUMER WILL BE RESPONSIBLE FOR:

FULL ONE-YEAR WARRANTY
One year from original purchase date.
Pay all costs for repairing or replacing any parts of this appliance which prove to be defective in materials or workmanship.
Costs of service calls that are listed under IMPORTANT RESPONSIBILITIES OF THE CONSUMER.*

LIMITED WARRANTY
(Applicable to the State of Alaska)
Time period listed above.
All of the provisions of the full warranty above and the exclusions listed below apply.
Costs of the technician’s travel to the home and any costs for pick up and delivery of the appliance required because of service.

EXCLUSIONS

1. CONSEQUENTIAL OR INCIDENTAL DAMAGES SUCH AS PROPERTY DAMAGE AND INCIDENTAL EXPENSES RESULTING FROM ANY BREACH OF THIS WRITTEN OR ANY IMPLIED WARRANTY.
   Note: Some states do not allow the exclusion or limitation of incidental or consequential damages, so this limitation or exclusion may not apply to you.
2. Service calls which do not involve malfunction or defects in workmanship or material, or for appliances not in ordinary household use. The consumer shall pay for such service calls.
3. Damages caused by services performed by servicers other than Frigidaire or its authorized servicers; use of parts other than genuine Frigidaire Home Products parts; obtained from persons other than such servicers; or external causes such as abuse, misuse, inadequate power supply or acts of God.
4. Products with original serial numbers that have been removed or altered and cannot be readily determined.

Keep your bill of sale, delivery slip, or some other appropriate payment record. The date on the bill establishes the warranty period should service be required. If service is performed, it is in your best interest to obtain and keep all receipts. This written warranty gives you specific legal rights. You may also have other rights that vary from state to state. Service under this warranty must be obtained by contacting Frigidaire Home Products:

800 • 944 • 9044
Frigidaire Home Products
P.O. Box 212378
Augusta, GA 30917

Product features or specifications as described or illustrated are subject to change without notice. All warranties are made by White Consolidated Industries, Inc. This warranty applies only in the 50 states of the U.S.A. and Puerto Rico.
Before beginning installation, carefully read these instructions. This will simplify the installation and ensure the dryer is installed correctly and safely. Leave these instructions near the Dryer after installation for future reference.

NOTE: The electrical service to the Dryer must conform with local codes and ordinances and the latest edition of the National Electrical Code, ANSI/NFPA 70.

NOTE: The Dryer is designed under ANSI Z 21.5.1 or ANSI/UL 2158 - CAN/CSA C22.2 (latest editions) for HOME USE only. This Dryer is not recommended for commercial applications such as restaurants or beauty salons, etc.

**WARNING** For your safety the information in this manual must be followed to minimize the risk of fire or explosion or to prevent property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquid in the vicinity of this or any other appliance.

- **WHAT TO DO IF YOU SMELL GAS**
  
  · Do not try to light any appliance.
  
  · Do not touch any electrical switch; do not use any phone in your building.
  
  · Clear the room, building or area of all occupants.
  
  · Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier's instructions.
  
  · If you cannot reach your gas supplier, call the fire department.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.
PRE-INSTALLATION REQUIREMENTS

Tools and Materials Required for Installation:

1. Phillips head screwdriver.
2. Channel-lock adjustable pliers.
3. Carpenter's level.
4. Flat or straight blade screwdriver.
5. Duct tape.
6. Rigid or flexible metal 4 inch (10.2 cm) duct.
7. Vent hood.
8. Pipe thread sealer (Gas).
9. Plastic knife

ELECTRICAL REQUIREMENTS

Electric Dryer

CIRCUIT - Individual 30 amp. branch circuit fused with 30 amp. minimum time delay fuses or circuit breakers.

POWER SUPPLY - 3 or 4 wire, 240 volt, single phase, 60 Hz, Alternating Current.

POWER SUPPLY CORD KIT - The dryer MUST employ a 3-conductor power supply cord NEMA 10-30 type SRDT rated at 240 volt AC minimum, 30 amp., with 3 open end spade lug connectors with upturned ends or closed loop connectors OR a 4-conductor power supply cord NEMA 14-30 type SRDT or ST (as required) rated at 240 volt AC minimum, 30 amp., with 4 open end spade lug connectors with upturned ends or closed loop connectors and marked for use with clothes dryers. If being installed in a manufactured (mobile) home, the dryer MUST employ a 4-conductor power supply cord NEMA 14-30 type SRDT or ST (as required) rated at 240 volt AC minimum, 30 amp., with 4 open end spade lug connectors with upturned ends or closed loop connectors and marked for use with clothes dryers (See ELECTRICAL CONNECTIONS FOR for additional instructions).

OUTLET RECEPTACLE - NEMA 10-30R (3wire) receptacle or NEMA 14-30R (4wire) receptacle to be located so the power supply cord is accessible when the dryer is in the installed position.

WARNING The following are specific requirements for proper and safe operation of your dryer. Failure to follow these instructions can create excessive drying times and fire hazards.

Do not use plastic flexible duct to exhaust the dryer. Excessive lint can build up inside exhaust system and create a fire hazard and restrict air flow. Restricted air flow will increase dryer times. If your present system is made up of plastic duct or metal foil duct, replace it with a rigid or flexible metal duct. Ensure the present duct is free of any lint prior to installing dryer duct.

EXHAUST SYSTEM REQUIREMENTS

Use only 4 inch (10.2 cm) diameter (minimum) rigid or flexible metal duct and approved vent hood which has a swing-out damper(s) that open when the dryer is in operation. When the dryer stops, the dampers automatically close to prevent drafts and the entrance of insects and rodents. To avoid restricting the outlet, maintain a minimum of 12 inches (30.5 cm) clearance between the vent hood and the ground or any other obstruction.

NOTE: Do not under any circumstances remove grounding prong from plug.
If the dryer is not exhausted outdoors, some fine lint will be expelled into the laundry area. An accumulation of lint in any area of the home can create a health and fire hazard. The dryer exhaust system MUST be exhausted to the outside of the dwelling!

Do not allow combustible materials (for example: clothing, draperies/curtains, paper) to come in contact with exhaust system. The dryer MUST NOT be exhausted into a chimney, a wall, a ceiling, or any concealed space of a building which can accumulate lint, resulting in a fire hazard.

Exceeding the length of duct pipe or number of elbows allowed in the "MAXIMUM LENGTH" charts can cause an accumulation of lint in the exhaust system. Plugging the system could create a fire hazard, as well as increase drying times.

Do not screen the exhaust ends of the vent system, nor use any screws or rivets to assemble the exhaust system. Lint can become caught in the screen, on the screws or rivets, clogging the duct work and creating a fire hazard as well as increasing drying times. Use an approved vent hood to terminate the duct outdoors, and seal all joints with duct tape. All male duct pipe fittings MUST be installed downstream with the flow of air.

Explosion hazard. Do not install the dryer where gasoline or other flammables are kept or stored. If the dryer is installed in a garage, it must be a minimum of 18 inches (45.7 cm) above the floor. Failure to do so can result in death, explosion, fire or burns.

<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>

In installations where the exhaust system is not described in the charts, the following method must be used to determine if the exhaust system is acceptable:

1. Connect an inclined or digital manometer between the dryer and the point the exhaust connects to the dryer.
2. Set the dryer timer and temperature to air fluff (cool down) and start the dryer.
3. Read the measurement on the manometer.
4. The system back pressure MUST NOT be higher than 0.75 inches of water column. If the system back pressure is less than 0.75 inches of water column, the system is acceptable. If the manometer reading is higher than 0.75 inches of water column, the system is too restrictive and the installation is unacceptable.

Although vertical orientation of the exhaust system is acceptable, certain extenuating circumstances could affect the performance of the dryer:

- Only the rigid metal duct work should be used.
- Venting vertical through a roof may expose the exhaust system to down drafts causing an increase in vent restriction.
- Running the exhaust system through an uninsulated area may cause condensation and faster accumulation of lint.
- Compression or crimping of the exhaust system will cause an increase in vent restriction.

The exhaust system should be inspected and cleaned a minimum of every 18 months with normal usage. The more the dryer is used, the more often you should check the exhaust system and vent hood for proper operation.
EXHAUST DIRECTION

All dryers shipped from the factory are set up for rear exhausting. However, on electric dryers, exhausting can be to the right or left side of the cabinet or the bottom of the dryer. On gas dryers, exhausting can be to the right side of the cabinet or the bottom of the dryer. Directional exhausting can be accomplished by installing Exhaust Kit, P/N 131456800, available through your parts distributor. Follow the instructions supplied with the kit.

EXHAUST DUCT LOCATING DIMENSIONS

GAS SUPPLY REQUIREMENTS

WARNING Replace copper connecting pipe that is not plastic-coated. Stainless steel or plastic-coated brass MUST be used.

1. Installation MUST conform with local codes, or in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.1 (latest edition)

2. The gas supply line should be of 1/2 inch (1.27 cm) pipe.

3. If codes allow, flexible metal tubing may be used to connect your dryer to the gas supply line. The tubing MUST be constructed of stainless steel or plastic-coated brass.

4. The gas supply line MUST have an individual shutoff valve.

5. A 1/8 inch (0.32 cm) N.P.T. plugged tapping, accessible for test gauge connection, MUST be installed immediately upstream of the gas supply connection to the dryer.

6. The dryer MUST be disconnected from the gas supply piping system during any pressure testing of the gas supply piping system at test pressures in excess of 1/2 psig (3.45 kPa).

7. The dryer MUST be isolated from the gas supply piping system during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.45 kPa).

LOCATION OF YOUR DRYER

DO NOT INSTALL YOUR DRYER:

1. In an area exposed to dripping water or outside weather conditions.

2. In an area where it will come in contact with curtains, drapes, or anything that will obstruct the flow of combustion and ventilation air.

3. On carpet. Floor MUST be solid with a maximum slope of 1 inch (2.54 cm).

INSTALLATION IN RECESS OR CLOSET

1. A dryer installed in a bedroom, bathroom, recess or closet, MUST be exhausted outdoors.

2. No other fuel burning appliance shall be installed in the same closet as the Gas dryer.

3. Your dryer needs the space around it for proper ventilation.

DO NOT INSTALL YOUR DRYER IN A CLOSET WITH A SOLID DOOR.

4. A minimum of 120 square inches (774.2 square cm) of opening, equally divided at the top and bottom of the door, is required. Air openings are required to be unobstructed when a door is installed. A louvered door with equivalent air openings for the full length of the door is acceptable.

MOBILE HOME INSTALLATION

1. Dryer **MUST** be exhausted outside (outdoors, not beneath the mobile home) using metal ducting that will not support combustion. Metal ducting must be 4 inches (10.16 cm) in diameter with no obstructions. Rigid metal duct is preferred.

2. If dryer is exhausted through the floor and area beneath the mobile home is enclosed, the exhaust system **MUST** terminate outside the enclosure with the termination securely fastened to the mobile home structure.

3. When installing a gas dryer into a mobile home, a provision must be made for outside make up air. This provision is to be not less than twice the area of the dryer exhaust outlet.

4. This dryer **MUST** be fastened to the floor. Mobile Home Installation Kit No. 346764 is available from your dealer.

5. Refer to other important venting requirements.

6. Installation **MUST** conform to current Manufactured Home Construction & Safety Standard (which is a Federal Regulation Title 24 CFR-Part 32-80) or when such standard is not applicable, with American National Standard for Mobile Homes.

**WARNING** The dryer is designed under ANSI Z 21.5.1 or ANSI?UL2158 - CAN/CSA C22.2 (latest editions) for **HOME USE** only.

UNPACKING

1. Using the four shipping carton corner posts (two on each side), carefully lay the dryer on its left side and remove foam shipping base. **CAUTION** To prevent damage, do not use the control panel as a means to pick up or move the dryer.

2. Return the dryer to an upright position.

REVERSING DOOR SWING

Your dryer is designed so the door swing may be reversed at any time without additional parts. Conversion is accomplished by transferring hinges to the opposite side of the cabinet.
“Solid Door” Reversal Instructions:

1. Open the dryer door. Remove the four hinge hole plugs from the left side of the door opening. Place nearby for future installation. **NOTE:** You may need a plastic knife to help pull out the plugs. Be careful not to scratch the paint.

2. Remove the four screws that secure the door hinges to the dryer front panel (see below). **NOTE:** Remove one screw from each of the two hinges first. Hold the door firmly before removing the last two screws.

3. Rotate the door 180° and reinstall the door hinges to the dryer front panel with the four screws.

4. Install the plugs from Step 1 into the holes left by removing the door in Step 2.

“Window Door” Reversal Instructions:

1. Open the dryer door. Remove the four hinge hole plugs from the left side of the door opening. Retain the plugs for use later. **NOTE:** You may need a plastic knife to help pull out the plugs. Be careful not to scratch the paint.

2. Remove the four screws that secure the door hinges to the dryer front panel. **NOTE:** Remove one screw from each of the two hinges first. Hold the door firmly before removing the last two screws.

5. Remove the two handle screws and remove the handle by pulling straight out from door.

6. Install the plugs from Step 3 into the holes left by removing the handle screws in Step 4.
7. Lay the door on a flat surface and support the edges of the door to keep it from turning. Apply moderate downward pressure on the lens with both hands and rotate it 180°. Align the handle holes in the lens with the handle holes in the transition ring.

8. Install the handle and screws removed in Step 4.

9. Remove the two hinges and reinstall the four screws. Note the installation orientation of the hinges.

10. Remove the screws from the opposite side of the door and use them to reinstall the hinges.

11. Install the door assembly on the left side of the door opening using the four screws removed in Step 2.
ELECTRICAL INSTALLATION

**ELECTRIC Dryers**

**WARNING** The following are specific requirements for proper and safe electrical installation of your dryer. Failure to follow these instructions can create electrical shock and/or a fire hazard.

- **This appliance MUST be properly grounded.** Electrical shock can result if the dryer is not properly grounded. Follow the instructions in this manual for proper grounding.

- **Do not use an extension cord with this dryer.** Some extension cords are not designed to withstand the amounts of electrical current this dryer utilizes and can melt, creating electrical shock and/or fire hazard. Locate the dryer within reach of the receptacle for the length power cord to be purchased, allowing some slack in the cord. Refer to the pre-installation requirements in this manual for the proper power cord to be purchased.

- **A U.L. approved strain relief must be installed onto power cord.** If the strain relief is not attached, the cord can be pulled out of the dryer and can be cut by any movement of the cord, resulting in electrical shock.

- **Do not use an aluminum wired receptacle with a copper wired power cord and plug (or vice versa).** A chemical reaction occurs between copper and aluminum and can cause electrical shorts. **The proper wiring and receptacle is a copper wired power cord with a copper wired receptacle.**

**NOTE:** Dryers operating on 208 volt power supply will have longer drying times than operating on 240 volt power supply.

**GROUNDING REQUIREMENTS**

**ELECTRIC Dryer**

**WARNING** Improper connection of the equipment grounding conductor can result in a risk of electrical shock. Check with a licensed electrician if you are in doubt as to whether the appliance is properly grounded.

For a grounded, cord-connected dryer:

1. The dryer **MUST** be grounded. In the event of a malfunction or breakdown, grounding will reduce the risk of electrical shock by a path of least resistance for electrical current.

2. If your dryer is equipped with a power supply cord having an equipment-grounding conductor and a grounding plug, the plug **MUST** be plugged into an appropriate, copper wired receptacle that is properly installed and grounded in accordance with all local codes and ordinances. If in doubt, call a licensed electrician.

For a permanently connected dryer:

1. The dryer **MUST** be connected to a grounded metal, permanent wiring system; or an equipment grounding conductor must be run with the circuit conductors and connected to the equipment-grounding terminal or lead on the appliance.

**GAS Dryers**

This dryer is equipped with a three-prong (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.

**ELECTRICAL CONNECTIONS FOR 3-WIRE SYSTEM**

**ELECTRIC Dryer**

1. Remove the screws securing the terminal block access cover and the strain relief mounting bracket located on the back of the dryer upper corner.

2. Install a U.L. approved strain relief into the power cord entry hole of the mounting bracket. Finger tighten the nut only at this time.

3. Thread a U.L. approved 30 amp. power cord, NEMA 10-30 Type SRDT, through the strain relief.
4. Attach the power cord neutral (center wire) conductor to the silver colored center terminal on the terminal block. Tighten the screw securely.

5. Attach the remaining two power cord outer conductors to the outer brass colored terminals on the terminal block. Tighten both screws securely.

**WARNING** Do not make a sharp bend or crimp wiring/ conductor at connections.

6. Reattach the strain relief mounting bracket to the back of the dryer with two screws. Tighten screws securely.

7. Tighten the screws securing the cord restraint firmly against the power cord.

8. Tighten the strain relief nut securely so that the strain relief does not turn.

9. Reinstall the terminal block cover.

### ELECTRICAL CONNECTIONS

**FOR 4-WIRE SYSTEM**

1. Remove the screws securing the terminal block access cover and the strain relief mounting bracket located on the back of the dryer upper corner.

2. Install a U.L. approved strain relief in the entry hole of the mounting bracket. Finger tighten the nut only at this time.

3. Remove the green neutral ground wire from the green ground screw located above the terminal block.

4. Attach the power cord neutral (center wire) conductor to the silver colored center terminal on the terminal block. Tighten the screw securely.

5. Attach the remaining two power cord outer conductors to the outer brass colored terminals on the terminal block. Tighten both screws securely.

**WARNING** Do not make a sharp bend or crimp wiring/ conductor at connections.

6. Reattach the strain relief mounting bracket to the back of the dryer with two screws. Tighten screws securely.

7. Tighten the screws securing the cord restraint firmly against the power cord.

8. Tighten the strain relief nut securely so that the strain relief does not turn.

9. Reinstall the terminal block cover.

### GAS CONNECTION

1. Remove the shipping cap from gas pipe at the rear of the dryer.

**NOTE: DO NOT** connect the dryer to L.P. gas service without converting the gas valve. An L.P. conversion kit must be installed by a qualified gas technician.

2. Connect a 1/2 inch (1.27 cm) I.D. semi-rigid or approved pipe from gas supply line to the 3/8 inch (0.96 cm) pipe located on the back of the dryer. Use a 1/2 inch to 3/8 inch (1.27 cm to 0.96 cm) reducer for a connection. Apply an approved thread sealer that is resistant to the corrosive action of liquefied gases on all pipe connections.
3. Open the shutoff valve in the gas supply line to allow gas to flow through pipe.

4. Test all connections by brushing on a soapy water solution. **NEVER TEST FOR GAS LEAKS WITH AN OPEN FLAME.**

**GENERAL INSTALLATION**

1. Connect the exhaust duct to outside exhaust system. Use duct tape to seal all joints.

2. With the dryer in its final position, adjust one or more of the legs until the dryer is resting solid on all four legs. Place a level on top of the dryer. **THE DRYER MUST BE LEVEL AND RESTING SOLID ON ALL FOUR LEGS.**

3. Plug the power cord into a grounded outlet.

**NOTE:** Check to ensure the power is off at circuit breaker/fuse box before plugging the power cord into the outlet.

4. Turn on the power at circuit breaker/fuse box.

**CAUTION** Before operating the dryer, make sure the dryer area is clear and free from combustible materials, gasoline, and other flammable vapors. Also see that nothing (such as boxes, clothing, etc.) obstructs the flow of combustion and ventilation air.

5. Run the dryer through a cycle check for proper operation.

**NOTE:** On gas dryers, before the burner will light, it is necessary for the gas line to be bled of air. If the burner does not light within 45 seconds the first time the dryer is turned on, the safety switch will shut the burner off. If this happens, turn the timer to "OFF" and wait 5 minutes before making another attempt to light.

6. If your dryer does not operate, please review the "Avoid Service Checklist" located in your Use and Care Guide before calling for service.

7. Place these instructions in a location near the dryer for future reference.

**REPLACEMENT PARTS**

If replacements parts are needed for your dryer, contact the source where you purchased your dryer, call 1-800-944-9044, or visit our website, www.frigidaire.com, for the Frigidaire Company Authorized Parts Distributor nearest you.

**CAUTION** Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

**WARNING** Destroy the carton and plastic bags after the dryer is unpacked. Children might use them for play. Cartons covered with rugs, bedspreads, or plastic sheets can become airtight chambers causing suffocation. Place all materials in a garbage container or make materials inaccessible to children.

**WARNING** The instructions in this manual and all other literature included with this dryer are not meant to cover every possible condition and situation that may occur. Good safe practice and caution **MUST** be applied when installing, operating and maintaining any appliance.
SECTION D - Washer & Dryer  
Pedestal Installation Instructions 

IMPORTANT: Read and save these instructions.  

**NOTICE!** This kit is intended to be installed by persons having electrical and mechanical training and a level of knowledge considered acceptable in the appliance repair trade.

Your safety and the safety of others are very important. Many important safety messages are provided in these instructions and on your appliance. Always read and obey all safety messages.

**WARNING**  
**EXCESSIVE WEIGHT HAZARD**  
Two or more people may be required to move and install the washer & dryer onto pedestals. Failure to comply may cause back or other injury.

Tools needed:
- level  
- 7/16” open end wrench or ratchet & socket  
- 9/16” open end wrench 
- adjustable wrench 
- #2 Phillips screwdriver 
- flat blade screwdriver

WASHER INSTALLATION 
Washer Installation Kit

1. Remove the washer installation hardware from the plastic bag.  
2. Attach the rear brackets to the pedestal with four #8 screws (2 per bracket).
3. Remove the front service panel from the washer. Using two or more people, carefully lift the washer onto the pedestal and set flush against the rear brackets as shown.

NOTE: If washer was previously installed, disconnect power cord, remove inlet hoses from water faucets and tape the drain hose to the top of the washer to eliminate excess water on the floor. Also, make sure the leveling legs are adjusted fully into the washing machine.

4. Align the sides of the washer with the sides of the pedestal and attach the washer to the rear brackets using four #10 screws (2 per bracket).

6. Insert the bolt/spacer assembly up through the pedestal with the front spacer positioned in the square hole of the pedestal and the bolt coming through the slotted hole in the washing machine base.

5. Open the drawer of the pedestal; assemble a carriage bolt through a front spacer, flat washer, and rubber washer.
7. Install a rubber washer, flat washer and hex nut onto the carriage bolt. Tighten the hex nut.

8. Repeat installation of bolt/spacer assembly for the other side.

9. After closing the pedestal drawer, carefully move the washer/pedestal assembly into position. **NOTE: Because of the increased weight caused by the addition of the pedestal, two or more people may be required.**

**NOTE: The washer/pedestal assembly MUST be on a solid floor and level for proper operation.**

After leveling the washer/pedestal assembly, adjust the lock nut on each leveling leg against the pedestal base and tighten with a wrench. Keep the leg extension at a minimum to prevent excessive vibration.

10. Refer to the installation instructions that came with the washer to properly complete electrical, water, and drain connections. If questions arise, please refer to the Owner’s Guide that came with the washer for contact information.

---

**DRYER INSTALLATION**

**Dryer Installation Kit**

1. Remove the dryer installation hardware from the plastic bag.

2. Attach the rear brackets to the pedestal with four #8 screws (2 per bracket).
3. Attach the front brackets to the pedestal with four #8 screws (2 per bracket).

**NOTE:** If dryer was previously installed, disconnect power cord and vent hose. Also, make sure the leveling legs are adjusted fully into the dryer.

4. Using two or more people, carefully lift the dryer onto the pedestal, tilting the dryer back slightly to engage the slots in the rear of the dryer with the tabs of the rear brackets on the pedestal.

5. Set the dryer down onto the pedestal making sure the service panel bracket on the dryer is behind the front brackets of the pedestal.
6. With the pedestal drawer open for better access, install the two #10 screws through the front brackets in the pedestal into the service panel bracket of the dryer.

7. After closing the pedestal drawer, carefully move the dryer/pedestal assembly into position.

**NOTE:** Because of the increased weight caused by the addition of the pedestal, two or more people may be required.

**NOTE:** The dryer/pedestal assembly **MUST** be on a solid floor and level for proper operation. After leveling the dryer/pedestal assembly, adjust the lock nut on each leveling leg against the pedestal base and tighten with a wrench. Keep the leg extension at a minimum to prevent excessive vibration.

8. Refer to the installation instructions that came with the dryer to properly complete electrical and venting connections. If questions arise, please refer to the Owner’s Guide that came with the dryer for contact information.

---

**WARRANTY**

**Full One Year Warranty on Mechanical Parts**

For one year from date of purchase, when this pedestal is installed with the listed washer or dryer (see owners manual for specific model) and operated according to the information in the Use and Care Guide, Operating Instructions and Installation Instructions, the supplier will replace any of its mechanical parts if they are defective in workmanship or material. Keep your bill of sale. The date of the bill establishes the warranty period should parts be required. This written warranty gives you specific rights. You may also have other rights which vary from state to state.

**Warranty Restriction**

If the pedestal is used for any other purpose than private family use or used with any product that requires modification for installation, the warranty is null and void.

**Warranty Parts**

Warranty parts are available by contacting the supplier where the pedestal was purchased or refer to the Use and Care Guide that came with the washer or dryer that is installed on the pedestal for contact information.
SECTION E - HOW THE COMPONENTS WORK

Clothes dryers remove moisture from clothes by pulling air, either warmed or room temperature, through the clothes while they are being tumbled by a turning drum. The moisture from the clothes is exhausted through the dryer vent system to the outside of the house.

The basic components are:

**Drum**

**Heat Source**

**Drive motor and blower**

**Electric**

**Gas**
Once inside the dryer cavity, the air is drawn between the rear wall of the dryer and the plenum. The holes in the plenum allow the air to be drawn across the heating element. In any cycle, other than Air Fluff, the heating element heats the air as it passes through.

The air then is drawn into the drum through the holes in the rear of the drum.

Since the moisture in the clothes is removed by air moving through the drum, it is important to understand the complete air flow system.

**Airflow electric dryers:**

Room air enters the dryer through a louvered panel in the rear right-hand corner of the dryer.
The air passes through the drum, picking up moisture and is drawn through the lint filter into the ductwork at the front of the dryer.

**Airflow gas dryers:**

The airflow in gas dryers is similar to electric dryers except for the heat source and the rear of the drum. The air enters the cavity through the louvered opening in the right rear corner of the dryer. The air is then pulled across the gas burner, through the burner chamber and is ducted to the rear of the drum.

The air enters the fan housing and is pushed out the exhaust vent to the outside of the house.

The drum is the same as in the electric dryer, except it does not have a heat baffle on it.

**Airflow problems:**

Airflow problems are usually caused by restrictions, leaks or short unrestricted vents resulting in longer drying times, hotter dryer surfaces and in extreme cases causing the thermal limiter to open on electric dryers.
Restrictions:

Restrictions can occur any place in the airflow system, but the most common are:

1. Installing the dryer in a small inclosed area; such as a closet without a louvered door that reduces the intake air.

2. Fan problems caused by either a slow running motor, a broken or deformed fan blade or a deformed fan housing.

3. A lint restriction in the lint screen area. Operator may not be cleaning the lint screen before using.

4. A restriction in the exhaust system in the house caused by the design of the vent, such as; the diameter of the vent pipe being too small, too long, too many right angles, or a collapsed or lint restricted vent pipe.

Note: Problems caused by the vent pipe in the house are not cover under the product warranty.

Air leaks:

Two types of air leaks may occur:

1. Air being drawn in around the door opening, between the drum and the front panel, or around the foam seal between the front duct and the blower housing, replaces some of the air being drawn through the drum and lowers the efficiency of the dryer.

Note: An air leak that occurs around the door opening or between the drum and the front panel usually will cause lint to build up on the inner panel of the door.

2. Air being pushed out around the blower housing or vent pipe inside the dryer, allows some of the moisture that has been removed from the clothes to be recirculated.

Short unrestricted vents:

The venting system in the dryer is designed to operate under some back pressure. This back pressure is needed to slow the airflow and allow the air to be heated before it passes through the clothes.

Note: With short direct vent runs; such as you have when the dryer is installed against an outside wall, use a 2 1/2" vent cap rather than a 4" vent cap.

Electrical Operation (Electric Dryers Models)

Note: Always refer to the wiring diagram or schematic with the product.

When the dryer is connected to electrical power, line 1 is connected to one side of the thermal limiter and the COM terminal of the heater relay RL 2 that is mounted on the electronic control board. Power is applied to the control board through thermal limiter to pin 1 of the eight pin plug. The electronic control board controls the operating temperature of the dryer and length of the cycle by either sensing the amount of moisture in the clothes or a fixed amount of time when time dry is used.

Note: For information on programming the electronic control and the cycles refer to section A.

Electronic Control Board Circuits:

Line 1 is applied to the control board at pin 1 of the eight pin plug and neutral on pin 2 of the eight pin plug. The control board receives inputs from the selector switch, temp switch and push buttons which programs the control, the contact sensors that senses the amount of moisture in the clothes and the control thermistor which senses the temperature in the dryer. The control board use these input to control the drive motor circuit by open and closing the contacts of relay RL 1 and the heater circuit by opening and closing the contacts of relay RL 2.
**Drive Motor Circuit:**

When power is connected to the dryer, line 1 is applied through the thermal limiter (a non-resettable fuse mounted on the rear wall of the dryer) to the COM terminal of the door switch.

When the door is closed the COM terminal is connected to terminal NO. of the door switch. From terminal NO. power is applied to terminal J4-2 of the motor relay RL 1 on the control board. When the control board closes relay RL 1 power is applied through terminal J4-1 to terminal M4 of the drive motor.

Terminal M4 is connected inside the motor to one side of the thermal overload. (The thermal overload protects the motor from being damaged by overheating.) The other side of the thermal overload is connected to one end of both the run winding and the start winding of the drive motor. When the motor is not turning, the other end of the start winding is connected internally to terminal M5 of the motor through the NC contact of the motor centrifugal switch. The other end of the run winding is also connected internally to terminal M5, which is connected to neutral.

When the motor is not turning, the start winding and the run winding are connected in parallel. When the contacts of relay RL 1 are closed, with the dryer door closed, line 1 and neutral voltage is applied across both the start and run windings of the drive motor. With power applied to both the start and run windings, the motor starts to turn.

When the speed of the motor reaches about 80% of it’s normal run speed, the contacts of the centrifugal switch remove power from the start winding thus removing the start winding from the circuit.

The drive motor preforms two tasks in the dryer. A pulley attached to one end of the motor shaft uses a belt to drive the dryer drum. The blower wheel is attached to the other end of the motor shaft to pull the air through the clothes and force it out the exhaust vent.

**Temperature Sensing Circuit:**

The temperature in the dryer is controlled by the control thermistor and the electronic control board. The control thermistor, mounted in the blower fan housing, is a negative coefficient thermistor that decreases in resistance as the temperature increases.

The electronic control board reads the resistance of the thermistor and converts it into temperature. It compares the reading from the thermistor to the temperature setting for the cycle.

**The Heating Circuit:**

The electronic control board applies power to the heating circuit through the contacts of heater relay RL 2. When the electronic control senses the temperature in the drum is below the programmed temperature, it closes the contact of RL 2. This applies line 1 power to the high limit thermostat mounted on the heating element assembly.

The high limit thermostat is a safety device that prevents
the dryer from overheating if the contacts of the RL 2 fail closed. The contacts of the high limit thermostat, normally closed, are set to open at a temperature above the preset temperature specifications of the electronic control board. From the output terminal of the high limit thermostat, line 1 is connected to one side of the element and to pin 3 of the eight pin plug. The other side of the heating element is connected to line 2 through the contacts of the second centrifugal switch in the drive motor. This switch prevents power from being applied to the element if the motor is not running. The connection to pin 3 allows the control to monitor the contacts of the high limit thermostat and show an error code if the contacts open above a preset number of times in a cycle.

**Drying Time:**

The amount of drying time is determined in one of two ways. A fixed amount of drying time may be turning the SELECTOR knob to one of the fixed drying times. The AUTO DRY cycles that variable amount of time by the size of the load, the amount of moisture in the clothes and the dryness setting selected.

In the AUTO DRY cycles, the electronic control reads the capacitance between the two sensor bars located in the vent cover.

When wet clothes are placed in the dryer, the clothes touch the sensor bars and the moisture lowers the capacitance between the bars. As the dryer runs, moisture is removed from the clothes and the capacitance between the bars increases. When the increase in capacitance satisfies the electronic control, the cycle status will change from “Auto Dry” to “Cool Down” and the load is tumbled without heat. At the end of cycle, the electronic control will turn the dryer off and the end of cycle signal will sound.

**Electrical Operation (Gas Dryers Models)**

**Note:** Always refer to the wiring diagram or schematic with the product.

**Sample wiring diagram.**

When the dryer is connected to electrical power, line 1 is connected to pin (1) of the eight pin plug of the control board, the terminal marked COM on the door switch and the COM terminal of the heater relay that is mounted on the electronic control board. Pin 1 of the eight pin plug provides power to the electronic control board. The electronic control board controls the operating temperature of the dryer and length of the cycle by either sensing the amount of moisture in the clothes or a fixed amount of time when time dry is used.

**Note:** For information on programming the electronic control and the cycles, refer to section A.

**Electronic Control Board Circuits:**

Line 1 is applied to the control board at pin 1 of the eight pin plug and neutral is connected on pin 2 of the six pin plug. The control board receives inputs from the membrane switches which program the control, the contact sensors that sense the amount of moisture in the clothes and the control thermistor which senses the temperature in the dryer. The control board uses these inputs to control the drive motor circuit by opening and closing the contacts of relay RL 1 and the heater circuit by opening and closing the contracts of relay RL 2.

**Drive Motor Circuit:**

When power is connected to the dryer, line 1 is applied to the COM terminal of the door switch. When the door
The COM terminal is connected to terminal NO of the door switch. From terminal NO, power is applied to terminal J4-2 of the control board and to the motor relay RL 1 on the control board. When the control board closes relay RL 1, power is applied through terminal J4-1 to terminal M4 of the drive motor.

Terminal M4 is connected inside the motor to one side of the thermal overload. (The thermal overload protects the motor from being damaged by overheating.) The other side of the thermal overload is connected to one end of both the run winding and the start winding of the drive motor. When the motor is not turning, the other end of the start winding is connected internally to terminal M5 of the motor through the NC contact of the motor centrifugal switch. The other end of the run winding is also connected internally to terminal M5 which is connected to neutral.

When the motor is not turning, the start winding and the run winding are connected in parallel. When the contacts of relay RL 1 are closed, with the dryer door closed, line 1 and neutral voltage is applied across both the start and run windings of the drive motor. With power applied to both the start and run windings, the motor starts to turn.

When the speed of the motor reaches about 80% of it’s normal run speed, the contacts of the centrifugal switch remove power from the start winding thus removing the start winding from the circuit.

The drive motor performs two tasks in the dryer. A pulley attached to one end of the motor shaft uses a belt to drive the dryer drum. The blower wheel is attached to the other end of the motor shaft to pull the air through the clothes and force it out the exhaust vent.

**Temperature Sensing Circuit:**

The temperature in the dryer is controlled by the control thermistor and the electronic control board. The control thermistor, mounted in the blower fan housing, is a negative coefficient thermistor that decreases in resistance as the temperature increases.

The electronic control board reads the resistance of the thermistor and converts it into temperature. The electronic control compares the reading from the thermistor to the temperature setting for the cycle and cycles the heating circuit accordingly.

**The Heating Circuit:**

The electronic control board applies power to the heating circuit through the contacts of relay RL 2. When the electronic control senses that the temperature in the drum is below the programmed temperature, it closes the contact of heater relay RL 2 applying line 1 to the high limit thermostat. The high limit thermostat is a safety device that prevents the dryer from overheating if the contacts of the relay RL 2 fail closed. The contacts of the high limit thermostat are normally closed and are set to open at a temperature above the preset temperature specifications of the electronic control board. From the output terminal of the high limit thermostat, line 1 is connected to pin 3 of the eight pin plug, one side of the holding coil of the gas valve, the secondary coil of the gas valve and the sensor that is mounted on the burner chamber.

The connection to pin 3 allows the control to monitor the contacts of the high limit thermostat and show an error code contacts open above a preset number of times in a cycle.

The holding coil, secondary coil, booster coil, sensor and igniter circuits interact with one another to assure safe operation of the dryer gas burner.

The gas valve has two chambers in series, both must be opened before gas will flow into the burner. The solenoid that controls the gas flow through the first chamber has two coils: the booster coil and the holding coil. The solenoid that control the second chamber has one coil, the secondary coil.
Since it takes less magnetic force to hold a solenoid open than it does to open it, the first solenoid remains open when the current through the booster coil is reduced. The reduction of current flow through the igniter reduces heat from the igniter but the sensor contacts are held open by the heat of the burner flame.

**Drying Time:**

The amount of drying time is determined in one of two ways: (1) A fixed amount of drying time may be obtained by turning the SELECTOR knob to one of the fixed drying times. (2) The AUTO DRY cycles that variable amount of time by the size of the load, the amount of moisture in the clothes and the dryness setting selected.

In the AUTO DRY cycles, the electronic control reads the capacitance between the two sensor bars located in the vent cover.

When wet clothes are placed in the dryer, the clothes touch the sensor bars and the moisture lowers the capacitance between the bars. As the dryer runs, moisture is removed from the clothes, the capacitance between the bars increases. When the increase in capacitance satisfies the electronic control, the cycle status will change from “Auto Dry” to “Cool Down” and the load is tumbled without heat. At the end of cycle, the electronic control will turn the dryer off and the end of cycle signal will sound.
SECTION F - TROUBLESHOOTING

Model Differences:
- **Better** models have a digital display.
- **Good** models do not have a digital display.

Failure Codes

The electronic controls of the dryer have self diagnostics codes built in that cover most products failures.

On **Better** models, the error codes will appear in the digital display as an E followed by either two numbers, a number and a letter or two letters. The control will beep and the STATUS indicator lights will flash. To stop the flashing and beeping, touch the Pause Cancel button. The error code remains stored in the control.

On **Good** models, the STATUS indicator lights will flash the number of times for the first digit after the E and the START indicator light will flash the number of times for the second digit after the E. When a failure occurs, the dryer stops or pauses. The control will beep and flash the STATUS lights to tell the customer that a failure has occurred. To stop the flashing and beeping, touch the Pause Cancel button. The error code remains stored in the control.

To view the error codes:

**Better Models:**
1. Rotate the CYCLE SELECT KNOB clockwise (3) setting from the Normal cycle option.
2. Press and hold the Select and Pause Cancel buttons simultaneously for (6) seconds.
3. Immediately after, press and hold the START and Pause Cancel buttons simultaneously for (4) seconds.
4. Rotate the CYCLE SELECT KNOB (1) click counterclockwise.

The error code will appear in the display. Troubleshoot the problem by using the chart on the next page.

To move to the next code, press the OPTIONS button. To clear code, press the Select button.
To exit this mode, simultaneously press and hold the Select and Pause Cancel buttons for (6) seconds to reset.

**Better & Good Models:**

Note: A letter appearing in the code stands for a number higher than nine.

<table>
<thead>
<tr>
<th>Letter</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>10</td>
</tr>
<tr>
<td>B</td>
<td>11</td>
</tr>
<tr>
<td>C</td>
<td>12</td>
</tr>
<tr>
<td>D</td>
<td>13</td>
</tr>
<tr>
<td>E</td>
<td>14</td>
</tr>
<tr>
<td>F</td>
<td>15</td>
</tr>
</tbody>
</table>

Example Code E4A: the first digit would be 4 and the second digit would be 10. If this code would appear on a washer in the **Good** model line, the STATUS indicator lights would blink four times and the START indicator light would blink ten times.

Electric and Gas dryers; blower motor runs but drum does not turn.
*Note: Always check wiring to the components.*

Drive motor runs but drum does not turn.

- Belt broken or off pulley.

Electric and Gas dryers; longer than normal drying times. (Possible E 4A)
*Note: Always check wiring to the components.*

Longer than normal drying times.

- Are the clothes wetter than normal when removed from the washer?
  - Yes.
    - Check washer spin cycle.
      - Yes.
        - Clear vent.
        - No.
          - Replace motor.
    - No.
      - Is the vent restricted?
        - Yes.
          - Is the blower motor running at full speed?
            - Yes.
              - Is the dryer level so the clothes touch the sensor bars?
                - Yes.
                  - Is the dryer heating properly?
                    - Yes.
                      - Review proper programming of the control with the customer.
                    - No.
                      - Refer to dryer not heating properly flow chart.
                - No.
                  - Level dryer.
        - No.
          - Is the dryer level so the clothes touch the sensor bars?
            - Yes.
              - Is the dryer heating properly?
                - Yes.
                  - Review proper programming of the control with the customer.

                        - Yes.
                          - Review proper programming of the control with the customer.
                        - No.
                          - Refer to dryer not heating properly flow chart.
                    - No.
                      - Level dryer.
                - No.
                  - Is the dryer level so the clothes touch the sensor bars?
Electric dryers not heating properly (Possible E 5b)

*Note: Always check wiring to the components.*

Electric dryer not heating properly.

Program the dryer for a **Normal** Cycle with **High** Temp and touch **Start**. Measure the voltage drop between L1 and L2 at the terminal block.

- Below 215 VAC:
  - Have customer check house wiring.
- Above 215 VAC:
  - Measure the voltage drop between two terminals of the heating element.
  - Not the same as between L1 & L2:
    - Check for poor connections in the dryer heating circuit.
  - The same as between L1 & L2:
    - Check the resistance of the control thermistor at room temperature.
      - 50000 Ohms +/- 10%:
        - Defective electronic control.
      - More or less than 50000 Ohms +/- 10%:
        - Defective thermistor.
Gas dryers not heating properly. (Possible E 5b)
*Note: Always check wiring to the components.*

Gas dryer not heating properly.

Program the dryer for a **Normal** Cycle with **Low** Temp and touch **Start**. Listen to hear if the burner cycle.

- Burner does not cycle.
- **Check the burner area for soot. Is the burner burning clean?**
  - **Yes.**
  - **No.**
    - **Check the gas pressure under flow.**
    - **Clean the orifice and check the valve.**

- Burner cycle.
  - **Check the resistance of the control thermistor at room temperature.**
    - **53000 Ohms +/- 10%.**
    - **More or less than 53000 Ohms +/- 10%.**
      - **Defective electronic control.**
      - **Defective thermistor.**

Electric and Gas dryers; dryer over heating. (Possible E 8C)
*Note: Always check wiring to the components.*

Dryer overheats.

- Is the vent restricted?
  - **Yes.**
  - **No.**
    - **Clear vent system.**
    - **Check the resistance of the control thermistor at room temperature.**
      - **53000 Ohms +/- 10%.**
      - **More or less than 53000 Ohms +/- 10%.**
        - **Defective control board.**
        - **Defective thermistor.**
Electric dryers; drive motor runs but dryer does not heat.

*Note: Always check wiring to the components.*

Drive motor runs but dryer does not heat.

Check the resistance of the control thermistor at room temperature.

50000 Ohms +/- 10%.

Defective electronic control board.

Program the dryer for a **Normal** Cycle with **High** Temp and touch **Start**. Measure the voltage drop between the two terminals of RL 2.

240 VAC.

Defective high limit thermostat.

Measure the voltage drop between the two terminals of the high limit thermostat.

240 VAC.

Defective high limit thermostat.

Remove power from the dryer and disconnect the black wire from RL 2. Restart the dryer and measure the voltage drop between red wire on RL 2 and neutral.

Open wire from terminal block.

120 VAC.

Remove power from the dryer, reconnect the black wire from RL 2 and disconnect the plug from the drive motor. Restart the dryer and measure the voltage drop between yellow and white wire in the plug.

120 VAC.

Defective motor.

Defective heating element.
Gas dryers; drive motor runs but dryer does not heat.

*Note: Always check wiring to the components.*

- Drive motor runs but dryer does not heat.

  - Check the resistance of the control thermistor at room temperature.
    - 50000 Ohms +/- 10%.
      - 120 VAC.
        - Defective electronic control board.
          - Igniter glows full brilliance or glows dim the full minute.
            - Defective sensor.
          - Igniter does not glow.
            - Measure the voltage drop from the terminal on the sensor with the orange wire to neutral.
              - 0.
                - Defective high limit thermostat.
                - 120 VAC.
                  - Infinity.
                    - Defective motor.
                    - Defective igniter.
    - More or less than 50000 Ohms +/- 10%.
      - Defective thermistor.

  - Program the dryer for a **Normal** Cycle with **High** Temp and touch **Start**. Measure the voltage drop between the two terminals of RL 2.
    - Igniter glows full brilliance or glows dim the full minute.
      - Defective sensor.
    - Igniter does not glow.
      - Measure the voltage drop between the two terminals of RL 2.
        - 120 VAC.
          - Defective electronic control board.
            - Defective gas valve or gas supply.
Electric and Gas dryers; clothes not dry in auto cycle.

*Note: Always check wiring to the components.*

Clothes not dry in the auto cycle.

- Tested good.
  - Check that the dryer is level or slightly tip forward.
  - Using the on function test do the 3 O’clock test. (Refer to pages 8)
    - Failed test.
      - Are the sensor bars clean?
        - No.
          - Check the connections at the bars and the wiring between the control and the bars.
            - Checks good.
              - Replace the electronic control.
            - Checks bad.
              - Tighten the connections or replace the wire.
        - Yes.
          - Checks good.
          - Checks bad.
SECTION G - TEARDOWN

This section will describe how to remove components from both gas and electric dryer. Unless stated, the procedure will be the same on all dryers. Unless stated, reverse the procedure to reinstall the component.

⚠️ WARNING Always remove electrical power from the dryer when working in an area where electrical power is present.

⚠️ WARNING Always turn the gas off to the dryer before opening any gas piping.

Removing the top panel:

1. The top panel is held in place in the front by (3) plastic tabs on the console and (2) screws in the rear.

2. Remove the (2) screws, slide the top back about 1/2 inch and lift the top off.

Removing the temp knob:

1. The temp knob has a D shaped shaft. To remove pull the knob straight off.

Removing the console:

1. Disconnect the dryer from electrical supply and remove the top panel.
2. Remove the (4) screws, (2) on each side, holding the console to the front panel and roll the console forward.

3. Disconnect the wiring from the control board and lift the console off.

4. Release the (2) tabs at the bottom and the (3) tabs at the top and lift the control board out.

Note: Be careful not to lose the springs.

Removing the control board:

1. Disconnect the dryer from electrical supply, remove the Temp knob and the top panel.

2. Remove the console.

3. Remove the (5) screws holding the control board to the console.

4. Release the (2) tabs at the bottom and the (3) tabs at the top and lift the control board out.

Removing the programming buttons and springs:

1. Disconnect dryer from the electrical supply and remove the control board.

2. Lift the buttons and springs out of the console.

3. The buttons are not all the same. Each button has a Roman numeral stamped into it and the console has Roman numeral above the button slot. Match the number on to button to the number on the slot.

Removing the temp knob shaft:

1. Disconnect dryer from the electrical supply, turn the TEMP knob to HOT and remove the knob.

2. Remove the control board.
3. Lift the shaft out of the control.

2. Using pliers squeeze the lock rim of the knob shaft and pull the knob out the front.

Removing the loading door:

1. Open the door and while supporting the door remove the (4) screws, (2) from each hinge, holding the door to the hinges.

Removing the selector knob shaft:

1. Disconnect dryer from the electrical supply, turn the SELECTOR knob to 12 O’clock and remove the control board.

2. Lift the shaft out of the control.

Removing the selector knob:

1. Disconnect dryer from the electrical supply and remove the control board.

Disassembling the loading door:

1. Remove the door from the dryer.
2. Separate the panels on the hinge and slide the inner panel out from behind the flange of the outer panel.

Removing the door handle:

1. Separate the panel and lift the handle off the inner door liner.

Removing the upper or lower door strike:

1. Separate the panel, squeeze the ends of the strike and push it through the inner panel.

Removing the door seal:

1. The door seal is fastened to the inner door liner by expandable tabs pushed through slots in the liner.

2. If the seal is to be replaced open the door and pull the seal from the liner. If the seal is to be reused, separate the panels and use a small screwdriver to push the tabs through the liner.

Removing the front access panel:

1. Place a 2 by 4 under the front of the dryer and remove the two screws holding the panel to the dryer base.

Removing the door switch:

1. Disconnect the dryer from electrical supply, open the door and remove the top.

2. Disconnect the wires from the door switch.
3. Squeeze the release tabs on the ends of the switch and push it out the front.

4. Pull out on the bottom of the front panel to release the spring load tabs.

**Removing the front panel:**

1. Disconnect the dryer from electrical supply, remove the console and front access panel.

2. Remove the (2) screws, one on each side, at the bottom holding the front panel to the bodysides.

3. Remove the (2) screw, one on each side about (8) inches down from the top, that holds the front panel to the bodysides.

5. Lift up on the front panel to release the (2) tabs at the top, one on each end, and swing the panel out.

6. Disconnect the wiring from the drum light, door switch, the ground wire, and unplug the wiring harness from the sensor bars.
Replacing the upper door catch:

1. Disconnect the dryer from electrical supply and remove the front panel.
2. Using a common screwdriver release the spring clip from the backcatch and push the catch out the front.

Replacing the lower door catch:

1. Disconnect the dryer from electrical supply, remove the front panel and the front panel air duct.
2. Using a common screwdriver release the spring clip from the backcatch and push the catch out the front.

Replacing the front panel air duct:

1. Disconnect the dryer from electrical supply and remove the front panel.
2. Remove the (2) screws holding the vent grill to the front panel.
3. Release the sensor wire harness and pull down to remove the air duct.

Replacing the sensor bars:

1. Disconnect the dryer from electrical supply.
2. Open the dryer door and remove the lint screen.
3. Remove the (2) screws holding the vent grill to the front panel.
4. Pull the grill into the drum and disconnect the wires.
Replacing the drum light bulb:

1. Open the dryer door, release the clip holding the light shield by pushing up, and unscrew the bulb.
2. Remove the top and disconnect the wires from the light socket.
3. Remove the light bulb, squeeze the tabs on the side of the socket and push the socket into the housing.

Replacing the drum light housing:

1. Disconnect the dryer from electrical supply.
2. Remove the top, lean the top of the front panel forward and disconnect the wires from the light socket.
3. Push in to release the tab at the end of the housing and push the housing into the drum.

Replacing the felt seal:

1. Disconnect the dryer from electrical supply.
2. Remove the front panel.
3. The felt seal is a (2) piece seal that is glued to front panel rim that the drum rides on.
4. To replace the seal pull the seal off and glue the replacement to the rim.

Replacing the drum light socket:

1. Disconnect the dryer from electrical supply.
Replacing the foam seal:

1. Disconnect the dryer from electrical supply.
2. Remove the front panel.
3. The foam seal is glued to front panel duct and seals between the front panel duct and the blower.
4. To replace the seal pull the seal off and glue the replacement to the duct.

Removing the vane from the drum:

1. Disconnect the dryer from electrical supply.
2. Open the door, remove the top panel, remove the (2) screws holding the vane to the drum and drop the vane into the drum.

Removing the rear access panel:

1. Remove the (2) screws holding the access panel to the rear panel and swing the left side of the vent out to disengage the tabs.

Releasing the dryer belt:

1. Remove the access panel.
2. Push the idler pulley to the right and slip the belt off the motor pulley.

Removing the drum:

1. Disconnect the dryer from electrical supply.
2. Remove the top and the front panels.
3. Release the belt from the motor.
4. Use the belt to raise rear of the drum to release the ball from the hitch and move the drum out the front.

**Removing the belt:**

1. Disconnect the dryer from electrical supply.
2. Remove the top and the front panels.
3. Release the belt from the motor.
4. From the front, slightly raise the front of the drum and slide the belt off.

**Removing the ball hitch from the drum:**

1. Disconnect the dryer from electrical supply and remove the drum.
2. Remove the (3) screws from inside the drum holding the ball to the drum.

**Removing the teflon glides:**

1. Disconnect the dryer from electrical supply and remove the front panel.
2. Squeeze the tabs to release the glides.
Removing the drum heat shield: (Electric dryers)

1. Disconnect the dryer from electrical supply and remove the drum.

2. Remove the (3) screws holding the shield to the rear of the drum.

Removing the high limit thermostat:

1. Disconnect the dryer from electrical supply and remove the top panel.

2. Disconnect the (2) wires and remove the (2) screws holding thermostat to the heating element assembly.

Removing the hitch:

1. Disconnect the dryer from electrical supply and remove the drum.

2. Using a 5/16" nut driver remove the (2) screws holding the hitch to the rear panel while holding the large tinnerman clip from the rear of the dryer.

Removing the thermal limiter: (Electric dryers)

1. Disconnect the dryer from electrical supply and remove the top panel.

2. Disconnect the (2) wires and remove the two screws holding limiter to the rear panel.

Note: Do not lose the grounding ball or the tinnerman mounting clip from the rear of the dryer.
Removing the heating element assembly: (Electric dryers)

1. Disconnect the dryer from electrical supply and remove the drum.
2. Disconnect the (2) wires from the heating element.
3. Remove the high limit thermostat.
4. From the rear of the dryer remove the (4) screws securing the heating element assembly to the rear of the cabinet.

Removing the control thermistor:

1. Disconnect the dryer from electrical supply and remove the drum.
2. Disconnect the wires from the thermistor and remove the (2) screws holding the thermistor to the blower housing.

Removing the blower housing and fan blade:

1. Disconnect the dryer from electrical supply and remove the drum.
2. Remove the control thermistor.
3. Using a 7/8” socket turn the fan blade clockwise while holding the motor shaft to remove the blade from the motor shaft.
4. Remove (2) screws holding the housing to the dryer base.

5. Remove the front motor lock by inserting a screwdriver at the rear of the housing to release the housing from the motor.

6. Raise the front of the motor and pull the housing forward.

**Removing the idler pulley:**

1. Disconnect the dryer from electrical supply and remove the rear access panel.

2. Release the belt from the motor pulley and slide the idler pulley off.

**Removing the idler pulley assembly:**

1. Disconnect the dryer from electrical supply and remove the rear access panel.

2. Release the belt from the motor pulley.

3. Release the idler spring from the motor and lift the assembly off the motor.

**Removing the drive motor:**

1. Disconnect the dryer from electrical supply and remove the drum.
Removing the ignitor: (Gas dryers)

1. Disconnect the dryer from electrical supply and unplug the igniter harness.

2. The igniter is held to the burner mounting bracket by a screw and a tab. Remove the screw and lift the igniter up to release the tab, then slide the igniter forward.

Removing the gas valve assembly: (Gas dryers)

1. Turn the gas supply off and disconnect the dryer from electrical supply.

2. Unplug the wires from the valves.

Removing the burner: (Gas dryers)

1. Disconnect the dryer from electrical supply and remove the front panel.

2. Unplug the igniter, remove the (2) screws holding the burner to the valve assembly bracket, and slide the burner into the combustion chamber to release the valve.
Removing the gas valve coils: (Gas dryers)

1. Disconnect the dryer from electrical supply and remove the front panel.

2. Disconnect the wires from the coils, remove the (2) screws holding the coil bracket to the valve base and lift the coils off.

Removing the sensor: (Gas dryers)

1. Disconnect the dryer from electrical supply and remove the front panel.

2. Disconnect the (2) wires from the sensor.

3. Remove the (1) screw holding the sensor to the combustion chamber.

Removing the combustion chamber: (Gas dryers)

1. Disconnect the dryer from electrical supply, remove the sensor and gas valve assembly.

3. Using a 15/16" open end wrench, disconnect the manifold pipe from the valve.

4. Remove the (1) screw securing the gas valve assembly bracket to the base, slide the gas valve assembly forward and lift the gas valve assembly out.

5. Remove the (2) screws holding the valve to the bracket.
2. Remove the (2) screws holding the combustion chamber to the base, raise the end and pull the chamber out of the duct.

Removing the duct and heat shield: (Gas dryers)

1. Disconnect the dryer from electrical supply, remove the drum.

2. Remove (4) screws holding the heat shield to the rear panel.

3. Lift the shield and duct out of the dryer and remove the (3) screws holding duct to the heat shield.

Removing the manifold pipe: (Gas dryers)

1. Disconnect the dryer from electrical supply.

2. Turn the gas supply off and disconnect the gas supply from the dryer.

3. Remove dryer front panel.

4. Using a 15/16" open end wrench disconnect manifold pipe from the valve.
5. Remove the (2) screws holding the manifold pipe to the base and lift the pipe out.

3. Remove the vent pipe out the rear of the dryer and remove the gasket from the vent pipe.

Removing the vent pipe: (Gas dryers)

1. Remove the (1) screw holding vent to the rear panel and pull the vent pipe out the back.

4. When reinstalling, install the gasket on the vent pipe, install the vent pipe in the dryer and slide half of the gasket on to the blower housing from the front of the dryer.

Removing the gasket between the vent pipe and blower housing: (Gas dryers)

1. Disconnect the dryer from electrical supply.

2. Remove front panel and slide the gasket completely on to the vent pipe.
